Sunidi Vijayakrishna Kumar

Data Scientist | Machine Learning and Analytics

Massachusetts, United States | +1 857-427-7965 | sunidivijayakrishnak@gmail.com | LinkedIn | GitHub

Education

Master of Science, Data Science Jan 2025 – May 2027
Northeastern University, Khoury College of Computer Sciences Boston, MA
Expected May 2027 | GPA: 3.6
Coursework: Computer Vision, Deep Learning, Machine Learning, Generative AI, Algorithms, NLP

Bachelor of Engineering, Information Science Jun 2019 – May 2023
Visvesvaraya Technological University (VTU) Bengaluru, India
GPA: 4.0

Technical Skills

- **Programming & Data Science**: Python, SQL, Pandas, NumPy, Statistical Analysis, EDA, UMAP, HDBSCAN, Matplotlib, Seaborn, Tableau, Power BI, Microsoft Excel, ARIMA, Time-Series Analysis
- **Machine Learning & AI**: scikit-learn, Deep Learning, TensorFlow, OpenCV, Computer Vision, NLP, LLMs, Multimodal AI, Feature Engineering, LSTM
- **GenAI & Agents**: RAG, Prompt Engineering, Agentic AI, LangGraph, AutoGen, CrewAI, Ollama
- **MLOps & Cloud**: AWS Bedrock, AWS EC2, AWS S3, Docker, Kubernetes, Airflow, CI/CD, FastAPI, Streamlit, Postgres, MinIO, Kafka
- **Web Technologies**: React, Vite, Django, JavaScript, HTML, CSS

Experience

Data Science Intern Aug 2026 – Present
Crewasis Brooklyn, NY, USA
- Built clustering and trend-analysis models with Python, scikit-learn, UMAP and HDBSCAN for trend analysis, competitive analysis, persona generation and consumer and scientific-literature insights.
- Used SQL, NumPy, Pandas, statistical analysis, EDA and Streamlit for analysis work.
- Built RAG and text-analysis pipelines with LLMs on AWS Bedrock to turn unstructured data into structured insights; used Ollama for local testing and applied prompt engineering.
- Worked on the SRR automation system (FastAPI, React/Vite, Postgres, MinIO) that extracts and cites information from scientific research papers.

Data Scientist Aug 2023 – Oct 2024
Utthunga – Product Engineering Services Bengaluru, India
- Processed and engineered about 50,000 multimodal sensor records, improving data quality for deep learning pipelines.
- Built ETL pipelines with Python, Pandas and Airflow that validated data before it reached ML models, supporting MLOps data pipelines for production ML systems.
- Developed computer vision models for real-time analytics and optimized inference latency; created data visualizations and dashboards to communicate KPIs to stakeholders.

DevOps Engineer Aug 2022 – Dec 2022
Smart Desert Bengaluru, India
- Developed Python-based pipelines for video data processing.
- Deployed applications using Docker and Kubernetes within CI/CD pipelines.

Projects

Fulfillment Center Demand Forecasting
Tech: ARIMA, LSTM
- Built time-series forecasting models (ARIMA, LSTM) to predict order demand, seasonality and peak fulfillment trends.
- Simulated robot allocation strategies based on the predicted demand.

Predictive Maintenance Pipeline for IoT Devices
Tech: Python, Kafka, PostgreSQL, Time-series
- Built a real-time predictive maintenance system that analyzes IoT sensor streams to forecast equipment failures in an industrial-style setting.
- Implemented time-series feature extraction on vibration, temperature and electrical signals to detect anomalies and early failure patterns.

Publications and Leadership

- Design of Smart Goggles for Visually Impaired with Audio Features, April 2023.
- Senator, Graduate Student Government, representing student interests and contributing to key initiatives.
- Awarded the Northeastern Graduate Leadership Institute badge for leadership development and active engagement.
